This documentation applies to the SM2 and SM4 Vector frequency inverter, and contains important technical data and describes installation, operation, and commissioning.

These instructions are only valid for SM2 and SM4 Vector frequency inverters with software rev 20 (see drive nameplate).
Please read the instructions before commissioning.

V0115
A Certifications
C Input Ratings
(B) Type
D Output Ratings

| Scope of delivery | Important |
| :---: | :---: |
| - 1 SM2 or SM4 Vector inverter with EPM installed (see Section 4.4) <br> - 1 Operating Instructions | After receipt of the delivery, check immediately whether the items delivered match the accompanying papers. LEESON does not accept any liability for deficiencies claimed subsequently. <br> Claim <br> - visible transport damage immediately to the forwarder. <br> - visible deficiencies / incompleteness immediately to your LEESON representative. |

All safety information given in these Operating Instructions have the same layout:
Signal Word! (characterizes the severity of the danger)
Note (describes the danger and informs on how to proceed)

| Icon |  | Signal Words |  |
| :---: | :---: | :---: | :---: |
|  | Warning of hazardous electrical voltage | DANGER! | Warns of imminent / impending danger. <br> Consequences if disregarded: will result in Death or severe injuries. |
|  | Warning of a general danger | WARNING! | Warns of potential, very hazardous situations. <br> Consequences if disregarded: could result in Death or serious injuries. |
|  | Warning of damage to equipment | STOP! | Warns of potential damage to material and equipment. <br> Consequences if disregarded: <br> Damage to the controller/drive or its environment. |
|  | Information | Note | Designates a general, useful note. <br> If you observe it, handling the controller/drive system is made easier. |

Note for UL approved system with integrated controllers: UL warnings are notes which apply to UL systems. The documentation contains special information about UL.

- Suitable for use on a circuit capable of delivering not more than $200,000 \mathrm{rms}$

Warnings! symmetrical amperes, at the maximum voltage rating marked on the drive.

- Use minimum $75^{\circ} \mathrm{C}$ copper wire only.
- Shall be installed in a pollution degree 2 macro-environment.

## Operation

Systems including controllers must be equipped with additional monitoring and protection devices according to the corresponding standards (e.g., technical equipment, regulations for prevention of accidents, etc.). The controller may be adapted to your application as described in this documentation.

## DANGER!

- After the controller has been disconnected from the supply voltage, live components and power connection must not be touched immediately, since capacitors could be charged. Please observe the corresponding notes on the controller.
- Please close all protective covers and doors prior to and during operation.
- Do not cycle input power to the controller more than once every two minutes.

## 1 Safety information

## General

## DANGER!

Some parts of LEESON controllers can be electrically live and some surfaces can be hot.
Non-authorized removal of the required cover, inappropriate use, and incorrect installation or operation creates the risk of serious injury to personnel or damage to equipment.
All operations concerning transport, installation, and commissioning as well as maintenance must be carried out by qualified, skilled personnel who are familiar with the installation, assembly, commissioning, and operation of variable frequency drives and the application for which it is being used.

## Installation

Ensure proper handling and avoid excessive mechanical stress. Do not bend any components and do not change any insulation distances during transport, handling, installation or maintenance.
Do not touch any electronic components or contacts. This drive contains electrostatically sensitive components, which can easily be damaged by inappropriate handling. Static control precautions must be adhered to during installation, testing, service and repair of this drive and associated options. Component damage may result if proper procedures are not followed.
This drive has been tested by Underwriters Laboratory (UL) and is an approved component in compliance with UL508 Safety Standard.
This drive must be installed and configured in accordance with both national and international standards. Local codes and regulations take precedence over recommendations provided in this and other LEESON documentation.
The SM2 and SM4 Vector drive is considered a component for integration into a machine or process. It is neither a machine nor a device ready for use in accordance with European directives (reference machinery directive and electromagnetic compatibility directive). It is the responsibility of the end user to ensure that the machine meets the applicable standards.

## Electrical connection

?WARNING!
When working on live drive controllers, applicable national safety regulations must be observed.
The electrical installation must be carried out according to the appropriate regulations (e.g. cable cross-sections, fuses, protective earth [PE] connection). While this document makes recommendations in regard to these items, national and local codes must be adhered to.
The documentation contains information about installation in compliance with EMC (shielding, grounding, filters and cables). These notes must also be observed for CE-marked controllers.
The manufacturer of the system or machine is responsible for compliance with the required limit values demanded by EMC legislation.

## Application

AWARNING!
The drive must not be used as a safety device for machines where there is a risk of personal injury or material damage. Emergency Stops, over-speed protection, acceleration and deceleration limits, etc. must be made by other devices to ensure operation under all conditions.
The drive features many protection devices which are aimed at protecting the drive and the driven equipment by generating a fault and shutting the drive and motor down by removing power. Mains power variances can also result in shutdown of the drive. When the fault condition disappears or is cleared, the drive can be configured to automatically restart. It is the responsibility of the user and/ or OEM and/or integrator to ensure that the drive is configured for safe operation.

## 2 Technical data

2.1 Standards and application conditions

| Conformity | CE Low Voltage Directive (73/23/EEC) |  |
| :---: | :---: | :---: |
| Approvals | UL 508C Underwriters Laboratories - Power Conversion Equipment |  |
| Input voltage phase imbalance | $\leq 2 \%$ |  |
| Supported Power Systems | $\begin{aligned} & \mathrm{TT} \\ & \mathrm{TN} \end{aligned}$ | - For central grounded systems, operation is permitted without restrictions. <br> - For corner grounded 400/500V systems, operation is possible but reinforced insulation to control circuits is compromised. |
| Humidity | $\leq 95 \%$ non-condensing |  |
| Temperature range | Transport | $-25 \ldots+70^{\circ} \mathrm{C}$ |
|  | Storage | $-20 \ldots+70^{\circ} \mathrm{C}$ |
|  | Operation | $-10 \ldots+55^{\circ} \mathrm{C}$ (with $2.5 \% /{ }^{\circ} \mathrm{C}$ current derating above $+40^{\circ} \mathrm{C}$ ) |
| Installation height | $0 \text {... 4000m a.m.s.I. }$ <br> (with $5 \% / 1000 \mathrm{~m}$ current derating above 1000 m a.m.s.l.) |  |
| Vibration resistance | acceleration resistant up to 1.0 g |  |
| WARNING! <br> Earth leakage current | > 3.5 mA to PE |  |
| Max Permissable Cable Length ${ }^{(1)}$ | $<=4.0 \mathrm{Hp}(3.0 \mathrm{~kW})$ | 30 meters shielded, 60 meters un-shielded |
|  | => $5.0 \mathrm{Hp}(3.7 \mathrm{~kW})$ | 50 meters shielded, 100 meters un-shielded |
| Enclosure | IP31 / NEMA 1 | IP65/NEMA 4X |
|  | NEMA 1 and NEMA 4X model enclosures are plenun rated in accordance with UL 508C and are suitable for installation in a compartment handling conditioned air. |  |
| Protection measures against | short circuit, earth fault, phase loss, over voltage, under voltage, motor stalling, over temperature, motor overload |  |
| Compliance with EN 61000-3-2 Requirements ${ }^{(2)}$ | $<0.5 \mathrm{~kW}$ | with mains choke |
|  | 0.5 ... 1 kW | with active filter |
|  | > 1 kW | without additional measures |
| Compliance with EN 61000-3-12 Requirements (2) | 16 ... 75 amp | Additional measures required for compliance with EN 61000-3-12 |

Operation in public supply networks (Limitation of harmonic currents i.a.w. EN 61000-3-2, Electromagnetic
Compatibiliy (EMC) Limits). Limits for harmonic current emissions (equipment input current up to 16A/phase).
(1) The stated cable lengths are permissiable at default carrier frequencies (refer to parameter P166).
(2) The additional measures described only ensure that the controller meets the requirements of the EN 61000-3-2. The machine/system manufacturer is responsible for the machine's compliance with the regulations.

| 174712 | 50/37.5 |  | 59 | 52 | 180 | 1163 |  |
| 174713 | 60/45 |  | 71 | 62 | 180 | 1395 |  |

(1) Frequency Range: $48 \mathrm{~Hz} \ldots 62 \mathrm{~Hz}$
(2) Current Limit (CLim) is a percentage of the output current, $\mathrm{I}_{\mathrm{n}}$. CLim $_{\max }$ is the maximum setting for P171. For 480VAC models, the $\mathrm{CLim}_{\text {max }}$ value in the 480 V column of the table is used when P107 is set to 1 . The $\mathrm{CLim}_{\text {max }}$ value in the 400 V column is used when P107 is set to 0 .

## STOP!

## Drive Derating

The SM2 and SM4 Vector Series drive is designed to operate at the Nominal Output Current $\left(\mathrm{I}_{n}\right)$ shown in the Ratings tables for most standard applications and industrial environments. The drive output current or operating temperature may need to be limited as described below:

- For installations above 1000 m a.m.s.I., derate $I_{\mathrm{n}}$ by $5 \%$ per 1000 m , do not exceed 4000 m a.m.s.l.
- Operation above $40^{\circ} \mathrm{C}$, derate $\mathrm{I}_{\mathrm{n}}$ by $2.5 \%$ per ${ }^{\circ} \mathrm{C}$, do not exceed $55^{\circ} \mathrm{C}$.
- Carrier Frequency (P166):
- If P166=2 ( 8 kHz ), derate $\mathrm{I}_{\mathrm{n}}$ to $92 \%$ of drive rating or do not exceed $33^{\circ} \mathrm{C}$ ambient
- If P166=3 ( 10 kHz ), derate $\mathrm{I}_{\mathrm{n}}$ to $84 \%$ of drive rating or do not exceed $27^{\circ} \mathrm{C}$ ambient For combinations of the above, please consult LEESON applications support for proper derating.

## WARNING!

Drives must not be installed where subjected to adverse environmental conditions
such as: combustible, oily, or hazardous vapors or dust; excessive moisture; excessive vibration or excessive temperatures. Contact LEESON for more information.

### 3.2 Electrical installation

## Installation After a Long Period of Storage

## STOP!

Severe damage to the drive can result if it is operated after a long period of storage or inactivity without reforming the DC bus capacitors.

If input power has not been applied to the drive for a period of time exceeding three years (due to storage, etc.), the electrolytic DC bus capacitors within the drive can change internally, resulting in excessive leakage current. This can result in premature failure of the capacitors if the drive is operated after such a long period of inactivity or storage.
In order to reform the capacitors and prepare the drive for operation after a long period of inactivity, apply input power to the drive for 8 hours prior to actually operating the motor.

### 3.2.1 Power Connections

DANGER!
Hazard of electrical shock! Circuit potentials are up to 600 VAC above earth ground. Capacitors retain charge after power is removed. Disconnect power and wait at least three minutes before servicing the drive.

## STOP!

STOP

- Verify mains voltage before connecting to drive.
- Do not connect mains power to the output terminals (U,V,W)! Severe damage to the drive will result.
- Do not cycle mains power more than once every two minutes. Damage to the drive will result.

| Mains and Motor Terminations |  |  |
| :--- | :--- | :--- |
| Type | Torque | Strip Length |
| 174991,174992 | $24 \mathrm{lb}-\mathrm{in}(2.7 \mathrm{Nm})$ | $7 / 16$ in $(10 \mathrm{~mm})$ |
| 174710,174711 | $27 \mathrm{lb}-\mathrm{in}(3.05 \mathrm{Nm})$ | 0.75 in $(19 \mathrm{~mm})$ |

### 3.2.1.1 Mains connection to 120VAC Single-Phase Supply

```
174603
174604
174605
174651
174652
174653
174654
```

3.2.1.2 Mains connection to 240VAC Single-Phase Supply

### 3.2.1.3 Mains connection to Three-Phase Supply

### 3.2.1.4 Motor Connection

PES = Protective Earth Shielding

Mains and Motor Terminations
$12 \mathrm{lb}-\mathrm{in}(1.3 \mathrm{Nm})$
0.25 in ( 6 mm )

SM4 Cover Screws Torque 6-7 lb-in
WARNING!
Leakage current may exceed 3.5 mA AC .
Minimum size of the protective earth conductor shall comply with local safety regulations for high leakage current equipment.

### 3.2.1.5 Installation Recommendations for EMC Compliance

For compliance with EN 61800-3 or other EMC standards, motor cables, line cables and control or communications cables must be shielded with each shield/screen clamped to the drive chassis. This clamp is typically located at the conduit mounting plate.
Motor cable should be low capacitance (core/core $<75 \mathrm{pF} / \mathrm{m}$, core/shield $<150 \mathrm{pF} / \mathrm{m}$ ). Filtered drives can meet the class A limits of EN 55011 and EN 61800-3 Category 2 with this type of motor cable up to 10 meters. NOTE: Refer to Appendix A for recommended cable lengths. Any external line filter should have its chassis connected to the drive chassis by mounting hardware or with the shortest possible wire or braid.

### 3.2.1.6 NEMA 4X (IP65) Input Terminal Block

For NEMA 4X (IP65) models with integrated EMC filter and/or integrated line disconnect, the input terminal block is located on the right-hand side of the SM4 inverter in the NEMA $4 \times$ (IP65) enclosure. The single and three phase models are illustrated herein. Refer to paragraph 3.2.3 Control Terminals for pin out information.

## WARNING

Power remains present for up to 3 minutes on power input terminals (L1, L2 and L3) and output terminals ( $\mathrm{U}, \mathrm{V}$ and W ) even when the disconnect switch is in the OFF position. Remove input power ahead of the drive and wait 3 minutes before removing the terminal cover.

## Installation

### 3.2.1.7 Dynamic Brake Connections

For NEMA 1 and NEMA 4X Drives rated up to 25 HP the Dynamic Brake connections are made as illustrated herein. Refer to the SM2 and SM4 Dynamic Brake instructions for complete information.
NEMA 1 (IP31) up to 30 HP

NEMA 4 (IP65) up to 10 HP

The $40 \ldots 40 \mathrm{HP}(30 \ldots 45 \mathrm{~kW})$ models include a dynamic brake transitor as standard and only require the connection of an external resistor kit for dynamic braking operation. The dynamic brake resistor connections for $40 \ldots 60 \mathrm{HP}$ ( $30 \ldots . .45 \mathrm{~kW}$ ) drives are standard built-in connections as illustrated in the diagram below. In the 40HP (30kW) model drives, the dynamic brake connector is on the right-hand side of the drive and the terminals from top to bottom are B-, BRAKE and B+. In the 50/60HP ( $37.5 / 45 \mathrm{~kW}$ ) model drives, the dynamic brake connector is on the left-hand side of the drive and the terminals from top to bottom are $B+$, BRAKE and $B$-.

### 3.2.2 Fuses/cable cross-sections

## Note

Observe local regulations.
Local codes may supersede these recommendations

(1) Installations with high fault current due to large supply mains may require a type D circuit breaker.
(2) UL Class CC or T fast-acting current-limiting type fuses, 200,000 AIC, preferred. Bussman KTK-R, JJN or JJS or equivalent.
(3) Thermomagnetic type breakers preferred.

## Observe the following when using Ground Fault Circuit Interrupters (GFCIs):

- Installation of GFCI only between supplying mains and controller.
- The GFCI can be activated by:
- capacitive leakage currents between the cable screens during operation (especially with long, screened motor cables)
- connecting several controllers to the mains at the same time
- RFI filters

### 3.2.3 Control terminals

Control Terminal Strip for 0.33-10HP (0.25-7.5 kW):

| Terminal | Data for control connections |  |
| :---: | :---: | :---: |
| 1 | Digital Input: Start/Stop | input resistance $=4.3 \mathrm{k} \Omega$ |
| 2 | Analog Common |  |
| 5 | Analog Input: $0 . . .10$ VDC | input resistance: $>50 \mathrm{k} \Omega$ |
| 6 | Internal DC supply for speed pot | +10 VDC, max. 10 mA |
| 25 | Analog Input: $4 . . .20 \mathrm{~mA}$ | input resistance: $250 \Omega$ |
| 4 | Digital Reference/Common | +15 VDC / 0 VDC, depending on assertion level |
| 11 | Internal DC supply for external devices | +12 VDC, max. 50 mA |
| 13A | Digital Input: Configurable with P121 | input resistance $=4.3 \mathrm{k} \Omega$ |
| 13B | Digital Input: Configurable with P122 |  |
| 13C | Digital Input: Configurable with P123 |  |
| 13D* | Digital Input: Configurable with P124 |  |
| 14 | Digital Output: Configurable with P142 | DC $24 \mathrm{~V} / 50 \mathrm{~mA}$; NPN |
| 30 | Analog Output: Configurable with P150...P155 | 0... $10 \mathrm{VDC}, \mathrm{max} .20 \mathrm{~mA}$ |
| 16 | Relay output: Configurable with P140 | AC $250 \mathrm{~V} / 3 \mathrm{~A}$ <br> DC 24 V / 2 A ... $240 \mathrm{~V} / 0.22$ A, non-inductive |
| 17 |  |  |
| 2* | Analog Common |  |
| TXA* | RS485 TXA |  |
| TXB* | RS485 TXB |  |

* $=$ Terminal is part of the terminal strip for the 15-25 HP models only

Control Terminal Strip for 15HP (11 kW) and Greater Drives:

The digital inputs can be configured for active-high or active-low by setting the Assertion Level Switch (ALsw) and P120. If wiring to the drive inputs with dry contacts or with PNP solid state switches, set the switch and P120 to "High" (+). If using NPN devices for inputs, set both to "Low" (-). Active-high (+) is the default setting.

$$
\begin{aligned}
& \text { HIGH }=+12 \ldots+30 \mathrm{~V} \\
& \text { LOW }=0 \ldots+3 \mathrm{~V}
\end{aligned}
$$

## Note

An F.AL fault will occur if the Assertion Level switch (ALsw) position does not match the parameter P120 setting and P100 or any of the digital inputs (P121...P123) is set to a value other than 0 .

## 4 Commissioning

### 4.1 Local Keypad \& Display

V0105
15HP ( 1 kW ) and greater Models

| Display | START BUTTON |
| :---: | :---: |
|  | In Local Mode ( $\mathrm{P} 100=0,4,6$ ), this button will start the drive. |
|  | STOP BUTTON |
| $\bigcirc$ | Stops the drive, regardless of which mode the drive is in. <br> 4 <br> WARNING! <br> When JOG is active, the STOP button will not stop the drive! |
|  | ROTATION |
| $\begin{array}{ll} \mathrm{R} & \mathrm{~A} \\ \mathrm{R} & \mathrm{~F} \end{array}$ | In Local Mode ( $\mathrm{P} 100=0,4,6$ ), this selects the motor rotation direction: <br> - The LED for the present rotation direction (FWD or REV) will be on <br> - Press R/F; the LED for the opposite rotation direction will blink <br> - Press $M$ within 4 seconds to confirm the change <br> - The blinking direction LED will turn on, and the other LED will turn off <br> When rotation direction is changed while the drive is running, the commanded direction LED will blink until the drive is controlling the motor in the selected direction. |
|  | MODE |
| $\stackrel{M}{\mu}$ | Used to enter/exit the Parameter Menu when programming the drive and to enter a changed parameter value. |
|  | UP AND DOWN BUTTONS |
|  | Used for programming and can also be used as a reference for speed, PID setpoint, or torque setpoint. When the $\boldsymbol{\Delta}$ and $\boldsymbol{\nabla}$ buttons are the active reference, the middle LED on the left side of the display will be on. |
| Display | INDICATING LEDs (on 4-character display) |
| $\frac{{ }_{\mathrm{FWD}}}{\mathrm{~F} \cdot}$ | FWD LED: Indicate the present rotation direction is forward. Refer to ROTATION description above. |
| $\underset{\text { REV }}{\mathbf{I I}}$ | REV LED: Indicate the present rotation direction is reverse. Refer to ROTATION description above. |
| $\stackrel{\Gamma}{\text { auto }}$ | AUTO LED: Indicates that the drive has been put into Auto mode from one of the TB13 inputs (P121... P124 set to $1 \ldots 7$ ). Also indicates that PID mode is active (if enabled). |
| -1. I | RUN LED: Indicates that the drive is running. |
| -1.1- | $\boldsymbol{\nabla}$ LED: Indicates that the $\boldsymbol{\triangle} \boldsymbol{\nabla}$ are the active reference. |

|  | NOTE <br> If the keypad is selected as the auto reference (P121...P124 is 6) and the corresponding TB-13 input is closed, the AUTO LED and $\boldsymbol{\Delta} \boldsymbol{\nabla}$ LEDs will both be on. |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | FUNCTIONS THAT FOLLOW ARE APPLICABLE TO SM2 DRIVES 15HP (11kW) AND GREATER |  |  |  |
| CTRL | CTRL <br> The CTRL pushbutton selects the start and speed reference control sources for the drive. Press [ $\stackrel{M}{\leftrightharpoons}$ ] mode button to accept the new control mode selection. |  |  |  |
|  | CTRL LEDs |  | START CONTROL | REFERENCE CONTROL |
|  |  | [LOCAL] [MAN] | Keypad | P101 Settings |
|  |  | [LOCAL] [AUTO] | Keypad | Terminal 13x Settings |
|  |  | [REMOTE] [MAN] | Terminal Strip | P101 Settings |
|  | (temotet man | [REMOTE] [AUTO] | Terminal Strip | Terminal 13x Settings |
|  | If P100 $=6$ the CTRL button is used to toggle start control between the terminal strip [REMOTE] and the keypad [LOCAL] |  | - REM/LOC LED indicating the present start control source is ON <br> - Press [CTRL]; the LED for other start control source will blink <br> - Press [M] within 4 sec to confirm the change <br> - Blinking LED will turn ON (the other LED will turn OFF) |  |
|  | If P113 $=1$ the CTRL button is used to toggle reference control between the TB-13x setup [AUTO] and P101 [MANUAL] |  | - AUT/MAN LED indicating present reference control is ON <br> - Press [CTRL]; the other reference control will blink <br> - Press [M] within 4 sec to confirm change <br> - Blinking LED will turn ON (the other LED will turn OFF) |  |
|  | If P100 $=6$ and $\mathrm{P} 113=1$, it is possible to change the start and reference control sources at the same time |  |  |  |

| Display | START CONTROL |  |
| :---: | :---: | :---: |
|  | The REMOTE/LOCAL LEDs indicate the current start control source. If the start control source is a remote keypad or the network, then both LEDs will be OFF. |  |
|  | REFERENCE CONTROL |  |
|  | The AUTO/MANUAL LEDs indicate the current reference control source. |  |
|  | IF P113 $=0$ or 2, the AUTO/MANUAL LEDs will match the AUTO LED on the 4-character display. IF P113 $=0$ and no AUTO reference has been setup on the terminal strip, the MANUAL LED will turn ON and the AUTO LED will turn OFF. |  |
|  | IF P113 = 1, the AUTO/MANUAL LEDS show the commanded reference control source as selected by the [CTRL] button. If the [CTRL] button is used to set the reference control source to AUTO but no AUTO reference has been setup on the terminal strip, reference control will follow P101 but the AUTO LED will remain ON. |  |
|  | UNITS LEDs |  |
|  | HZ : current display value is in Hz | In Speed mode, if P178 = 0 then HZ LED will be ON. If P178 > 0, the Units LEDs follow the setting of P177 when the drive is in run (non-programming) mode. <br> In Torque mode, the HZ LED will be ON when the drive is in run (non-programming) mode. <br> In Pid mode, the Units LEDs follow the setting of P203 when the drive is in run (non-programming) mode. <br> If P179 $>0$, the Units LEDs will show the unit of the diagnostic parameter that is being displayed. |
|  | \%: current display value is in \% |  |
|  | RPM: current display value is in RPM |  |
|  | AMPS: current display value is in Amps |  |
|  | /UNITS current display value is a per unit (i.e./ $\mathrm{sec}, / \mathrm{min}, / \mathrm{hr}$, etc.) |  |

### 4.2 Drive Displays and Modes of Operation

## Speed Mode Display

In the standard mode of operation, the drive frequency output is set directly by the selected reference (keypad, analog reference, etc.). In this mode, the drive display will show the drive's output frequency.

## PID Mode Display

When the PID mode is enabled and active, the normal run display shows the actual PID setpoint. When PID mode is not active, the display returns to showing the drive's output frequency.

## Torque Mode Display

When the drive is operating in Vector Torque mode, the normal run display shows the drive's output frequency.

## Alternate (Run-Screen) Display

When P179 (Run Screen Display) is set to a value other than 0, one of the diagnostic parameters (P501...P599) is displayed. Example: if P179 is set to 1, then diagnostic parameter P501 (Software version) is displayed. If P179 = 2, then P502 (Drive ID) is displayed.

### 4.3 Parameter setting

V0106

### 4.4 Electronic programming module (EPM)

The EPM contains the drive's operational memory. Parameter settings are stored in the EPM and setting changes are made to the "User settings" in the EPM.
An optional EPM Programmer (model EEPM1RA) is available that allows:

- An EPM to be copied directly to another EPM.
- An EPM to be copied to the memory of the EPM Programmer.
- Stored files can be modified in the EPM Programmer.
- Stored files can be copied to another EPM.

As the EPM Programmer is battery operated, parameter settings can be copied to an EPM and inserted into a drive without power being applied to the drive. This means that the drive will be fully operational with the new settings on the next application of power.

Additionally, when the drive's parameter settings are burned into an EPM with the EPM Programmer, the settings are saved in two distinct locations: the "User settings" and the "OEM default settings". While the User settings can be modified in the drive, the OEM settings cannot. Thus, the drive can be reset not only to the "factory" drive default settings (shown in this manual), but can be set to the Original Machine settings as programmed by the OEM.

While the EPM can be removed for copying or to use in another drive, it must be installed for the drive to operate (a missing EPM will trigger an F.FI fault).

## Commissioning

### 4.5 Parameter menu

### 4.5.1 Basic Setup Parameters

| Code |  | Possible Settings |  | IMPORTANT |
| :---: | :---: | :---: | :---: | :---: |
| No. | Name | Default | Selection |  |
| P ILD | Start Control Source | 0 | 0 Local Keypad | Use RUN button on front of drive to start |
|  |  |  | 1 Terminal Strip | Use start/stop circuit wired into the terminal strip. See Section 3.2.3 |
|  |  |  | 2 Remote Keypad Only | Use RUN button on optional Remote Keypad to start |
|  |  |  | 3 Network Only | - Start command must come from network (Modbus, CANopen, etc) <br> - Requires optional communication module (refer to the network module documentation). <br> - Must also set one of the TB-13 inputs to 9 (Network Enable); see P121...P123 |
|  |  |  | 4 Terminal Strip or Local Keypad | Allows start control to be switched between terminal strip and local keypad using one of the TB-13 inputs. See note below. |
|  |  |  | 5 Terminal Strip or Remote Keypad | Allows start control to be switched between terminal strip and optional remote keypad using one of the TB13 inputs. See note below. |
|  |  |  | 6 CTRL Button Select | Allows start control to be switched between terminal strip and local keypad using the CTRL button. NOTE: P100 Selection 6 is applicable to $15 \mathrm{HP}(11 \mathrm{~kW})$ and higher models only. |
|  |  |  | WARNING! <br> P100 $=0$ disables TB-1 as a STOP input! STOP circuitry may be disabled if parameters are reset back to defaults (see P199) |  |
|  |  | $\mathbf{i}$ | Note <br> - P100 = 4, 5: To switch between control sources, one of the TB-13 inputs (P121...P123) must be set to 08 (Control Select); TB-13x OPEN (or not configured): Terminal strip control TB-13x CLOSED: Local ( $\mathrm{P} 100=4$ ) or Remote $(\mathrm{P} 100=5)$ keypad <br> - P100 = 0, 1, 4: Network can take control if P121...P123 = 9 and the corresponding TB-13x input is CLOSED. <br> - The STOP button on the front of the drive is always active except in JOG mode. <br> - An F. AL fault will occur if the Assertion Level switch (ALsw) position does not match the P120 setting and P100 is set to a value other than 0 . |  |

| Code |  | Possible Settings |  | IMPORTANT |
| :---: | :---: | :---: | :---: | :---: |
| No. | Name | Default | Selection |  |
| P\|1 | Standard Reference Source | 0 | 0 Keypad (Local or Remote) | Selects the default speed or torque reference when no Auto Reference is selected using the TB-13 inputs |

## Note

- When input is activated, settings $1 . . .7$ override P101
- When TB-13A...TB-13C are configured for Auto References other than MOP, TB-13C overrides TB-13B, and TB-13B overrides TB-13A. Any other Auto Reference will have priority over MOP.
- Settings $10 . . .14$ are only valid in Terminal Strip mode ( $\mathrm{P} 100=1,4,5$ )
- If Start/Run/Jog Forward and Start/Run/Jog Reverse are both activated, drive will STOP
- If Jog input is activated while the drive is running, the drive will enter Jog mode; when Jog input is deactivated, drive will STOP
- An F. FL fault will occur if the Assertion Level switch (ALsw) position does not match the P120 setting and any of the digital inputs (P121...P123) are set to a value other than 0.
- An F. I L fault will occur under the following conditions:
- TB-13A...TB-13C settings are duplicated (each setting, except 0 and 3, can only be used once)
- One input is set to "MOP Up" and another is not set to "MOP Down", or vice-versa.
- One input is set to 10 and another input is set to $11 \ldots 14$.
- One input is set to 11 or 12 and another input is set for 13 or 14.
- Typical control circuits are shown below:
- If any input is set to 10,12 or $14, \mathrm{P} 112$ must be set to 1 for Reverse action to function.

P120 may need to be reset for the digital input devices being used. <br> An F. AL fault may occur if P120 and the Assertion switch are not set identically. <br> Note 5 <br> If an EPM that contains data from a previous compatible software version is installed: <br> - The drive will operate according to the previous data, but parameters cannot be changed ( $c E$ will be displayed if attempted) <br> - To update the EPM to the current software version, set P199 = 5. The parameters can now be changed but the EPM is incompatible with previous software revisions. |  |

### 4.5.4 PID Parameters

| Code |  | Possible Settings |  | IMPORTANT |
| :---: | :---: | :---: | :---: | :---: |
| No. | Name | Default | Selection |  |
| P200 | PID Mode | 0 | 0 Disabled <br> 1 Normal-acting <br> 2 Reverse-acting <br> 3 Normal-acting, Bi-directional <br> 4 Reverse-acting, Bi-directional | - Normal-acting: As feedback increases, motor speed decreases <br> - Reverse-acting: As feedback increases, motor speed increases <br> - PID mode is disabled in Vector Torque mode (P300 = 5) <br> - Selections 3, 4: If P112=1, PID controller output sets the speed, (range -max freq to +max freq) |
|  |  | $\mathbf{i}$ | Note <br> To activate PID mode, one of the TB-13 inputs (P121...P123) must be used to select the Auto Reference that matches the desired PID setpoint reference. If the selected PID setpoint reference uses the same analog signal as the PID feedback (P201), an F.I L fault will occur. Example: The desired PID setpoint reference is the keypad ( $\mathbf{\Delta}$ and $\mathbf{\nabla}$ ). Set TB-13x $=6$ (Auto Reference: Keypad): <br> - TB-13x = closed: PID mode is active <br> - TB-13x = open: PID mode is disabled and the drive speed will be controlled by the reference selected in P101. |  |
| P201 | PID Feedback Source | 0 | $0 \quad 4-20 \mathrm{~mA}$ (TB-25) | Must be set to match the PID feedback signal |
|  |  |  | 1 0-10 VDC (TB-5) |  |
| P202 | PID Decimal Point | 1 | 0 PID Display = XXXX | Applies to P204, P205, P214, P215, P231...P233, P242, P522, P523 |
|  |  |  | 1 PID Display $=$ XXX. ${ }^{\text {K }}$ |  |
|  |  |  | 2 PID Display = XX.XX |  |
|  |  |  | 3 PID Display $=$ X. XXX |  |
|  |  |  | 4 PID Display $=. \mathrm{XXXX}$ |  |
| P203 ${ }^{(2)}$ | PID Units | 0 | 0 \% | Select the UNITS LED that will be illuminated when the drive is running in PID control mode |
|  |  |  | 1 /UNITS |  |
|  |  |  | 2 AMPS |  |
|  |  |  | 3 NONE |  |
| P204 | Feedback at Minimum Signal | 0.0 | -99.9 3100.0 | Set to match the range of the feedback signal being used |
| P205 | Feedback at Maximum Signal | 100.0 | -99.9 3100.0 | Example: Feedback signal is 0-300 PSI; P204 = 0.0, P205 = 300.0 |

(2) Parameter applicable to models 15 HP ( 11 kW ) and higher.

| P563 | Sequencer: Number of cycles since start | 0 |  | 65535 |  |
| P564 | Sequencer: <br> Number of cycles remaining | 0 |  | 65535 |  |

Note: Parameters P560-P564 are visible only when P700 > 0 (i.e. the sequencer is enabled)

### 4.5.7.1 Terminal and Protection Status Display

 Parameter P530 allows monitoring of the control terminal points and common drive conditions:An illuminated LED segment indicates:

- the protective circuit is active (LED 1)
- the Logic Assertion Switch is set to High (+)
- input terminal is asserted (LED 2)
- output terminal is energized (LED 4)
- the Charge Relay is not a terminal, this segment will be illuminated when the Charge Relay is energized (LED 4)

### 4.5.7.2 Keypad Status Display

Parameter P531 allows monitoring of the keypad pushbuttons:

An illuminated LED segment indicates when the button is depressed.

LED 1 and LED 2 are used to indicate pushbutton presses on a remote keypad that is attached to the drive. LED 3 and LED 4 indicate button presses on the local drive keypad.

## Commissioning

### 4.5.8 Onboard Communications Parameters 15-30HP (11-22kW)

The P6xx Onboard Communication parameters are applicable to the 15HP (11kW) and greater models only.

| Code |  | Possible Settings |  | IMPORTANT |
| :---: | :---: | :---: | :---: | :---: |
| No. | Name | Default | Selection |  |

### 4.5.9 Sequencer Parameters

The P700 sequencer parameters are listed herein. Refer to section 4.5 .7 for P56x Sequencer Diagnostic Parameters.

| Code |  | Possible Settings |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| No. | Name | Default | Selection | IMPORTANT |

(2) Parameter applicable to models $15 \mathrm{HP}(11 \mathrm{~kW})$ and higher.

## Commissioning

| Code |  | Possible Settings |  |  |  | IMPORTANT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No. | Name | Default | Selection |  |  |  |
| P706 | Sequencer: Action after Stop/Start transition or Fault Restart | 0 | 0 Restart at beginning of sequence |  |  | Pointed by TB13x |
|  |  |  | 1 Restart at beginning of current seg |  |  |  |
|  |  |  | 2 Start at beginning of prior segment |  |  |  |
|  |  |  | 3 Start at beginning of next segment |  |  |  |
| Pר | Sequencer: Number of cycles | 1 | 1 | 65535 |  | $\begin{aligned} & 1=\text { single scan; } 65535=\text { continuous } \\ & \text { loop } \end{aligned}$ |
| P70日 | Sequencer: Time units/scaling | 0 | 00.1 | \{sec\} | 6553.5 | Setup units/scaling for all sequencer time related parameters |
|  |  |  | $\begin{array}{ll} 1 & 1 \\ 2 & 1 \end{array}$ | \{sec\} | 65535 |  |
|  |  |  |  | \{min\} | 65535 |  |
|  |  | $\mathbf{i}$ | NOTE: <br> P708 rescales the following sequencer related parameters: <br> - Segment Times in current step: P712, P717, P722, P727, P732, P737, P742, P747, P752, P757, P762, P767, P772, P777, P782, P787, P792 <br> - Sequence diagnostic/status: P561, P562 |  |  |  |
|  | Segment \#1 |  |  |  |  |  |
| P7 10 | Segment \#1 Frequency Setpoint | 0.0 | -500.0 | \{Hz\} | 500.0 | If P112 $=\mathbf{1}$, negative sign forces reverse direction |
| P711 | Segment \#1 <br> Accel/Decel <br> Time | 20.0 | 0.0 | \{sec\} | 3600.0 |  |

## WARNING

If the input defined to "Start Sequence" is opened during a sequence, the drive will exit sequencer mode and will run at the specified standard or alternate speed source (dependent on drive configuration).

### 4.5.9.1 Sequencer Parameters

WARNING
If the input defined to "Start Sequence" is opened during a sequence, the drive will exit sequencer mode and will run at the specified standard or alternate speed source (dependent on drive configuration).

### 4.5.9.2 Sequencer Parameters

| Action after Stop/Start (P100) transition/digital input (if setup for <br> sequencer mode) transition or restart after trip. |  |
| :--- | :--- |
| P706 | Action |
| 0 | Restart at beginning of sequence (pointed by TB13x) |
| 1 | Restart at beginning of current segment |
| 2 | Start at beginning of prior segment |
| 3 | Start at beginning of next segment |

### 4.5.9.3 Sequencer Status

## NOTE

On the "End Segment", the output voltage is not present until after the end segment delay P792 has expired. On the other segments the output voltage is present on entry to the segment. The same is true for the digital outputs.

## 5 Troubleshooting and Diagnostics

### 5.1 Status/Warning Messages

| Status / Warning |  | Cause | Remedy |
| :---: | :---: | :---: | :---: |
| br | DC-injection brake active | DC-injection brake activated <br> - activation of digital input (P121...P123 = 18) <br> - automatically (P110 $=2,4 \ldots 6$ ) <br> - automatically (P111 = 1,3) | Deactivate DC-injection brake <br> - deactivate digital input <br> - automatically after P175 time has expired |
| bF | Drive ID warning | The Drive ID (P502) stored on the EPM does not match the drive model. | - Verify motor data (P302...P306) and perform Auto Calibration. <br> - Set drive mode (P300) to 0 or 1 <br> - Reset the drive (P199 to 3 or 4) and reprogram. |
| [AL | Motor Auto-calibration is being performed | See P300, P399 |  |
| ${ }^{\text {c }}$ E | An EPM that contains valid data from a previous software version has been installed | An attempt was made to change parameter settings | Parameter settings can only be changed after the EPM data is converted to the current version (P199 = 5) |
| CL | Current Limit (P171) reached | Motor overload | - Increase P171 <br> - Verify drive/motor are proper size for application |
| dEE | Decel Override | The drive has stopped decelerating to avoid tripping into HF fault, due to excessive motor regen ( 2 sec max). | If drive trips into HF fault: <br> - Increase P105, P126 <br> - Install Dynamic Braking option |
| Err | Error | Invalid data was entered, or an invalid command was attempted |  |
| FLL | Fast Current Limit | Overload | Verify drive/motor are proper size for application |
| F5t | Flying Restart Attempt after Fault | $\mathrm{P} 110=5,6$ |  |
| LE | OEM Settings Operation warning | An attempt was made to change parameter settings while the drive is operating in OEM Settings mode (P199 = 1) | In OEM Settings mode, making changes to parameters is not permitted |
| [F | OEM Defaults data warning | An attempt was made to use (or reset to) the OEM default settings (P199 = 1 or 2) using an EPM without valid OEM data. | Install an EPM containing valid OEM Defaults data |
| L[ | Fault Lockout | The drive attempted 5 restarts after a fault but all attempts were unsuccessful (P110 = 3...6) | - Drive requires manual reset <br> - Check Fault History (P500) and correct fault condition |

## Troubleshooting and Diagnostics

| Status / Warning |  | Cause | Remedy |
| :---: | :--- | :--- | :--- |
| PdEC | PID Deceleration Status | PID setpoint has finished <br> its ramp but the drive is still <br> decelerating to a stop. |  |
| PI d | PID Mode Active | Drive has been put into PID <br> Mode. See P200. |  |
| SLP | Sleep Mode is active | See P240...P242 |  |
| 5P | Start Pending | The drive has tripped into a <br> fault and will automatically <br> restart (P110 =3...6) | To disable Auto-Restart, set <br> P110 $=0 . . .2$ |
| SPd | PID Mode disabled. | Drive has been taken out of PID <br> Mode. See P200. |  |
| StoP | Output frequency $=0$ Hz <br> (outputs U, V, W inhibited) | Stop has been commanded <br> from the keypad, terminal strip,, <br> or network | Apply Start command (Start <br> Control source depends on <br> P100) |

## Troubleshooting and Diagnostics

### 5.2 Drive Configuration Messages

When the Mode button is pressed and held, the drive's display will provide a 4-digit code that indicates how the drive is configured. If the drive is in a Stop state when this is done, the display will also indicate which control source commanded the drive to Stop (the two displays will alternate every second).

| Configuration Display |  |  |  |
| :---: | :---: | :---: | :---: |
| Format $=$ x.y.zz | $\begin{aligned} & \hline x=\text { Control Source: } \\ & L=\text { Local Keypad } \\ & \mathbf{t}=\text { Terminal Strip } \\ & \mathbf{r}=\text { Remote Keypad } \\ & \mathbf{n}=\text { Network } \end{aligned}$ | $\begin{aligned} & y=\text { Mode: } \\ & 5=\text { Speed mode } \\ & P=\text { PID mode } \\ & t=\text { Vector Torque mode } \end{aligned}$ | $\begin{aligned} & \mathrm{zz}=\text { Reference: } \\ & C P=\text { Keypad } \Delta \nabla \\ & E U=0-10 \mathrm{VDC}(\mathrm{~TB}-5) \\ & E I=4-20 \mathrm{~mA}(\mathrm{~TB}-25) \\ & J L=J o g \\ & n t=\text { Network } \\ & Q P=M O P \\ & P I \ldots . . . P 7=\text { Preset } 1 \ldots 7 \\ & 01 . . .16=\text { Sequencer } \\ & \text { Segment } \end{aligned}$ |
|  | Example: <br> - L.5.[P = Local Keypad Start control, Speed mode, Keypad speed reference <br> - t.P.EU = Terminal Strip Start control, PID mode, 0-10 VDC setpoint reference <br> - E.L. I2 = Terminal Strip Start control, Sequencer Operation (Speed mode), Segment \#12 <br> - n.t. $\mathrm{PZ}=$ Network Start control, Vector Torque mode, Preset Torque \#2 reference <br> - n.5. $03=$ Network Start control, Speed mode, Speed reference from Sequencer Segment \#03 |  |  |
| Stop Source Display |  |  |  |
| Format $=\mathrm{x} .5$ EP $^{P}$ | $\begin{aligned} & \text { L.stp = Stop command came from Local Keypad } \\ & \text { t.stp = Stop command came from Terminal Strip } \\ & \text { r.stp = Stop command came from Remote Keypad } \\ & \text { n.stp = Stop command came from Network } \end{aligned}$ |  |  |

## Troubleshooting and Diagnostics

### 5.3 Fault Messages

The messages below show how they will appear on the display when the drive trips. When looking at the Fault History (P500), the F. will not appear in the fault message.

| Fault |  | Cause | Remedy ${ }^{(1)}$ |
| :---: | :---: | :---: | :---: |
| F.AF | High Temperature fault | Drive is too hot inside | - Reduce drive load <br> - Improve cooling |
| F.fl | Assertion Level fault | - Assertion Level switch is changed during operation <br> - P120 is changed during operation <br> - P100 or P121...P123 are set to a value other than 0 and P120 does not match the Assertion Level Switch. | - Make sure the Assertion Level switch and P120 are both set for the type of input devices being used, prior to setting P100 or P121...P123. See 3.2.3 and P120. |
| F.bF | Personality fault | Drive Hardware | Pow |
| F.LF | Control fault | An EPM has been installed that is either blank or corrupted | - Power down and install EPM with valid data <br> - Reset the drive back to defaults |
| F.cF | Incompatible EPM fault | An EPM has been installed that contains data from an incompatible parameter version | (P199 = 3, 4) and then reprogram <br> - If problem persists, contact factory technical support |
| F.dbF | Dynamic Braking fault | Dynamic braking resistors are overheating | - Increase active decel time (P105, P126, P127). <br> - Check mains voltage and P107 |
| F.EF | External fault | - P121...P123 = 21 and that digital input has been opened. <br> - P121...P123 = 22 and that digital input has been closed. | - Correct the external fault condition <br> - Make sure digital input is set properly for NC or NO circuit |
| F.FI | EPM fault | EPM missing or defective | Power down and replace EPM |
| $\begin{aligned} & \text { F.F2 } \\ & \text { F.FIZ } \end{aligned}$ | Internal faults |  | Contact factory technical support |
| F.Fnr | Control Configuration Fault | The drive is setup for REMOTE KEYPAD control ( $\mathrm{P} 100=2$ or 5 ) but is not setup to communicate with a remote keypad | Set P400 = 1, or P600 = 1 |
|  |  | The drive is setup for NETWORK ONLY control ( $\mathrm{P} 100=3$ ) but is not setup for network communications | Set P400 or P600 to a valid network communications protocol selection |
| F.Fol | Loss of 4-20 mA signal fault | 4-20 mA signal (at TB-25) is below $2 \mathrm{~mA}(\mathrm{P} 163=1)$ | Check signal/signal wire |
| F.LF | OEM Defaults data fault | Drive is powered up with P199 =1 and OEM settings in the EPM are not valid. | Install an EPM containing valid OEM Defaults data or change P199 to 0. |

(1) The drive can only be restarted if the error message has been resent.

| Fault |  | Cause | Remedy ${ }^{(1)}$ |
| :---: | :---: | :---: | :---: |
| F.HF | High DC Bus Voltage fault | Mains voltage is too high | Check mains voltage and P107 |
|  |  | Decel time is too short, or too much regen from motor | Increase active decel time (P105, P126, P127) or install Dynamic Braking option |
| F.IL | Digital Input Configuration fault (P121...P123) | More than one digital input set for the same function | Each setting can only be used once (except settings 0 and 3 ) |
|  |  | Only one digital input configured for MOP function (Up, Down) | One input must be set to MOP Up, another must be set to MOP Down |
|  |  | PID mode is entered with setpoint reference and feedback source set to the same analog signal | Change PID setpoint reference (P121...P123) or feedback source (P201). |
|  |  | One of the digital inputs (P121... P 123 ) is set to 10 and another is set to 11... 14 . | Reconfigure digital inputs |
|  |  | One of the digital inputs (P121... P 123 ) is set to 11 or 12 and another is set to 13 or 14. |  |
|  |  | PID enabled in Vector Torque mode ( $\mathrm{P} 200=1$ or 2 and $\mathrm{P} 300=5$ ) | PID cannot be used in Vector Torque mode |
| F.JF | Remote keypad fault | Remote keypad disconnected | Check remote keypad connections |
| F.LF | Low DC Bus Voltage fault | Mains voltage too low | Check mains voltage |
| F.nld | No Motor ID fault | An attempt was made to start the drive in Vector or Enhanced V/ Hz mode prior to performing the Motor Auto-calibration | See P300...P399 for Drive Mode setup and calibration. |
| F.ntF | Module communication fault | Communication failure between drive and Network Module. | Check module connections |
| $\begin{aligned} & \text { F.nFI } \\ & \text { F.nFG } \end{aligned}$ | Network Faults | Refer to the module documentation. for Causes and Remedies. |  |
| F. DF | Output fault: Transistor fault | Output short circuit | Check motor/motor cable |
|  |  | Acceleration time too short | Increase P104, P125 |
|  |  | Severe motor overload, due to: <br> - Mechanical problem <br> - Drive/motor too small for application | - Check machine / system <br> - Verify drive/motor are proper size for application |
|  |  | Boost values too high | Decrease P168, P169 |
|  |  | Excessive capacitive charging current of the motor cable | - Use shorter motor cables with lower charging current <br> - Use low capacitance motor cables <br> - Install reactor between motor and drive. |
|  |  | Failed output transistor | Contact factory technical support |

[^2]
## Troubleshooting and Diagnostics

| Fault |  | Cause | Remedy ${ }^{(1)}$ |
| :---: | :---: | :---: | :---: |
| F. QFI | Output fault: Ground fault | Grounded motor phase | Check motor and motor cable |
|  |  | Excessive capacitive charging current of the motor cable | Use shorter motor cables with lower charging current |
| F.PF | Motor Overload fault | Excessive motor load for too long | - Verify proper setting of P108 <br> - Verify drive and motor are proper size for application |
| F.rF | Flying Restart fault | Controller was unable to synchronize with the motor during restart attempt; (P110 = 5 or 6) | Check motor / load |
| F.5F | Single-Phase fault | A mains phase has been lost | Check mains voltage |
| F.UF | Start fault | Start command was present when power was applied ( $\mathrm{P} 110=0$ or 2 ). | - Must wait at least 2 seconds after power-up to apply Start command <br> - Consider alternate starting method (see P110). |

(1) The drive can only be restarted if the error message has been reset.

## Appendix A

## A． 1 Permissable Cable Lengths

The table herein lists the permissable cable lengths for use with an SM Flux Vector inverter with an internal EMC filter．

NOTE
This table is intended as a reference guideline only；application results may vary．The values in this table are based on testing with commonly available low－capacitance shielded cable and commonly available AC induction motors． Testing is conducted at worst case speeds and loads．

| Maximum Permissible Cable Lengths（Meters）for SM Flux Vector Models with Internal EMC Filters |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mains | Model | 4 kHz Carrier$(P 166=0)$ |  | 6 kHz Carrier （P166＝1） |  | 8 kHz Carrier （P166＝2） |  | 10 kHz Carrier （P166＝3） |  |

NOTE：The＂de＂and＂ e ＂symbols are place holders in the Model part number that contain different information depending on the specific configuration of the model．

## Resale of Goods

In the event of the resale of any of the goods, in whatever form, Resellers/Buyers will include the following language in a conspicuous place and in a conspicuous manner in a written agreement covering such sale:

The manufacturer makes no warranty or representations, express or implied, by operation of law or otherwise, as to the merchantability or fitness for a particular purpose of the goods sold hereunder. Buyer acknowledges that it alone has determined that the goods purchased hereunder will suitably meet the requirements of their intended use. In no event will the manufacturer be liable for consequential, incidental or other damages. Even if the repair or replacement remedy shall be deemed to have failed of its essential purpose under Section 2-719 of the Uniform Commercial Code, the manufacturer shall have no liability to Buyer for consequential damages.

Resellers/Buyers agree to also include this entire document including the warnings and cautions above in a conspicuous place and in a conspicuous manner in writing to instruct users on the safe usage of the product.

This information should be read together with all other printed information supplied by LEESON Electric.
